

The Associació Catalana d'Enginyers de Telecomunicació (ACET) [Catalan Association of Telecommunications Engineers] is the representative body for telecommunications engineering students and members who study or practice their profession in Catalonia, and have voluntarily decided to form part of this group. The ACET provides technical, tax and legal advice with support and orientation for performing professional work.

The entity facilitates contacts with other professionals and the possibility of participating in discussion forums on subjects of interest in the sector. It also offers access to exclusive information on the sector (regulations, events and functions of the sector, etc.)

The ACET organizes training seminars and courses. These are conducted in different areas:

- Technical courses on current subjects
- Professional practice courses
- Courses on other skills

The ACET supports and collaborates in a wide range of Internet-fostering activities, in the technical, social and cultural fields.

The ACET gives its support to Associació puntCAT, and is a member of such Association, because this entity represents the civil society of Catalan language and culture in its diversity and around the world. It fully supports its goal of increasing recognition of the Catalan language and culture on the internet through the establishment a .CAT TLD. The ACET thinks that the Catalan language and culture recognized in Internet will open a border for this community.

The ACET offer his technical services and his professionals to give support to the operation-of .CAT Registry, both at the managerial and technical levels.

Carles Salvadó i Usach
ACET President
